Supplemental Advisory Action

- 1. This communication is in response to amendment after-final mailed 10/07/02, claims 1-8, 18-26, 28-29 and 31-36 remain pending.
- 2. Amendment raises new issues that require more than nominal consideration. In this case, data type has been amended to read "audio/video protocol type". Amendment will not be entered.
- 3. Applicant argues (a) prior art of record does not teach claim limitation as recited, specifically, the receiver including demultiplexer for dynamically selecting a subset of the set of data streams", because the multiplexing of the prior art is performed on all video streams and this is not according to applicant a subset.

In response to applicant's argument (a) prior art Smith teaches delivering a media streams comprising video and/or audio (see abstract, col 1/lines 64-67) for delivering a plurality of video and/or audio media data type signals (see Figs. 1-5a, audio and/or video media streams, col 3/lines 20-35) the system comprising; a receiver for receiving the set of data stream from the network (col 20/lines 11-col 21/line 25, transmission/reception processing modules), the receiver including a selectively routing, filtering or separating media streams (i.e. demultiplexing) means (multiplexing (1) means, col 1/lines 53-62, Fig. 21) for dynamically selecting a subset of the set of data streams (dynamic selection (13), means, col 6/lines 49-col 7/line 26, dynamic selection of multiple media streams, see abstract, and multiplexing means col 27/lines 31-55); As applicant concedes all video is a subset of a media stream comprising audio and/or video.

4. Applicant argues (b) prior art of record does not teach claim limitation as recited, specifically, where the receiver including a demultiplexer.

In response to argument b, prior art Smith a receiver for receiving the set of data stream from the network (col 20/lines 11-col 21/line 25, transmission/reception processing modules), the receiver including a selectively routing, filtering or separating media streams (i.e. demultiplexing) means (multiplexing (1) means, col 1/lines 53-col 2/line 6, Fig. 21) for dynamically selecting a subset of the set of data streams (dynamic selection (13), means, col

6/lines 49-col 7/line 26, dynamic selection of multiple media streams, see abstract, and multiplexing means col 27/lines 31-55), two receiving (media-in portion 20, col 7/lines 35-39) including receivers coupled to said demultiplexing means for handling routed data streams (first reception means col 7/lines 58-67, having decoding (28) means, and second reception means col 8/lines 12-22);

5. Applicant argues (c), prior art of record does not teach claim limitation as recited, specifically, two or more corresponding decoders modules for handling and decoding two or more types of the data streams.

In response to argument c, prior art teaches Clapp teaches a computer system comprising two or more receiver payload handler modules and two or more corresponding decoder modules for handling and decoding two or more types of data (Fig. 5, (elements 150, 170, 102, 104, 70)), col 5/lines 1-5, 20-22), Bar teaches selecting (Bar: filtering components (38, 40) determine media type col 9/lines 33-40) a subset of the plurality of audio media data streams (Bar: media data stream selected from a group of audio data, col 2/lines 32-37, selecting by type col 3/lines 25-34) including media data streams of different media data types (Bar: col 6/lines 5-20, selected subset in accordance with different media data stream voice types, channeled per media data stream type, col 7lines 56-col 8/line 1, 18-24); routing (Bar: filtering (24) passes selected, filtering by type and passing said selected type col 7/lines 56-col 8/line 1 to corresponding relevant module (28) type, of Fig. 2), the selected subset of the plurality of audio media data stream to corresponding decoder modules (G.711, G.722, etc.,) in audio codec component (Bar: 102 of Fig. 2, col 13/lines 31-48) based on their media data stream type (Bar: Fig. 5, steps 3-5, determined type, col 10/lines 21-47, media type including standard categories, including audio standards, col 6/lines 5-20, Fig. 2 illustrates routing from module (24) to (28) based on the data type and routing from (28) to corresponding (104) for video and (102) for audio, this is routing based on the data type, whether data type, i.e. audio or video or different audio or video data type standards).

6. Applicant's arguments have been fully considered but not rendered persuasive.

Art Unit: 2142

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Prieto, B. whose telephone number is (703) 305-0750. The Examiner can normally be reached on Monday-Friday from 6:00 to 3:30 p.m. If attempts to reach the examiner by telephone are unsuccessful, the Examiner's Supervisor, Mark H. Rinehart can be reached on (703) 305-4815. The fax phone number for the organization where this application or proceeding is assigned is (703) 308-6606. Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 305-3800/4700.

Any response to this action should be mailed to:

Commissioner of Patents and Trademarks
Washington, D.C. 20231

or Faxed to:

(703) 746-7239, for Official communications and entry

Or:

(703) 746-7240, for Non-Official or draft communications, please label "PROPOSED" or "DRAFT".

Or Telephone:

(703) 306-5631 for TC 2100 Customer Service Office.

Hand-delivered responses should be brought to Crystal Park II,

2121 Crystal Drive, Arlington. VA., Fourth Floor (Receptionist), further ensuring that a receipt is

provided stamped "TC 2100".
